Q HOL  $\rightarrow$  SQL

The diagram illustrates the relationship between class, table, and column names. On the left, a vertical curly brace groups the terms 'className', 'field name', and 'entity class'. An arrow points from this group to the word 'Table'. On the right, another vertical curly brace groups the terms 'TableName', 'column', and 'Table'. An arrow points from this group to the word 'Table'. The word 'Table' is positioned at the bottom center, receiving arrows from both groups.

$\Rightarrow$   $JPA \rightarrow$  Hibernate, TopLink, ...  
 $JPA \rightarrow$  HQL

SQL  $\rightarrow$  SELECT \* FROM tableName (variable)

HOL → From entry (Vaccine)

SOL → SELECT id, Vaccine\_Name FROM Vaccine  
↓  
column names                  Task Name

HQL → SELECT     id, tableName     from     tableName

↓                          ↓

propertyName / id        entity class Name

SQL: select id, vacuume from vacuume where (N(?, ?, ?));

QOL :- select propName from (busName where (ID1, ID2));
